Project Description

The focus of this safety improvements project, funded by FDOT Local Agency Program, is to construct low-cost and effective safety features on and along the roadway to improve safety of the traveling public and adjacent property owners. The improvements must be completed within the existing right-of-way and without major roadway reconstruction, such as adjustment of roadway profile, addition of travel lanes, or full shoulder widening.

Proposed Improvements

This 3.6 miles segment of Old Bainbridge Road is outside the County's Canopy Road Protection Zone. It has narrow travel lanes (approximately 11-ft wide) and numerous curves, including a S-curve near the St. Paul Missionary Baptist Church. The initial recommendations include adding reduced speed ahead and curve warning signs, installing object markers, piping deep ditches at certain curves, shoulder widening on outside of curves, and possible radar feedback speed limit signs.
